

DESIGNED FIXTURES

Purposive, frozen inputs

Gate conformance

valid control
named failure codes

Repair arms

$K=0 \cdot \text{retry} \cdot \rho \cdot \text{oracle}$
frozen repairability classes

Integrity mutations

checksum / replay
linkage / continuity

Adapter + accounting

strict response classes
assignment guards

DETERMINISTIC OBSERVATION

Versioned artifacts and exact counts

Frozen manifest + hashes

case IDs / arm IDs
config / input / state

Offline runner

proposal $\rightarrow$ gate $\rightarrow$ outcome
one classified row / case

Designated check operations

schema + checksum
semantic replay + continuity

Generated evidence tables

raw counts + exact ratios
no population p-values

supported

OBSERVED IN THIS PAPER

Designed-fixture agreement
Rejected-state immutability
Bounded attempt accounting
Guided-vs-oracle repair separation
Implemented fault-fixture detection
Mechanism conformance for frozen cases

NOT MEASURED — FUTURE WORK

Live-model repair quality or superiority
Player benefit or narrative quality
Affect-adaptation efficacy
Commercial-engine performance
Semantic / policy completeness
Cryptographic authentication

No result arrow crosses into the future-work panel.
